## CENTRAL INTELLIGENCE GROUP

## INTELLIGENCE REPORT

COUNTRY Austria/USSR

DATE:

SUBJECT Soviet Petroleum Research Project

INFO. Prior to  
11 December 1947

DIST. 27 January 1948

25X1A

PAGES 25X1A

ORIGIN [REDACTED]

SUPPLEMENT [REDACTED]

25X1X

1. The Soviets have begun a serious study of petroleum resources in the eastern European countries, with a view to a more economical development of sources already producing, as well as the exploitation of still untapped deposits. The organization to which these duties are assigned is known in Austria as the Soviet Petroleum Administration's Geological Research Company for Eastern Europe (Gesellschaft zur geologischen Aufschliessung Ost-Europas im Rahmen der Sowjetischen Mineralölverwaltung). The group is said to have been planned since August 1947, though the date of its activation is not known.

Location:

Headquarters are at present in Vienna, where the company is seeking a suitable building. For the present, they occupy offices in Kantgasse 1, Vienna I, home of the Sowjetische Mineralölverwaltung, Zistersdorf section. Source has also heard a rumor that the permanent seat of the organization will not be in Austria.

Jurisdiction:

All countries occupied by, or under economic control of, the Soviet Union.

Capital:

At present, for the procurement and furnishing of offices, laboratories and other installations, the company has a sum of 2,000,000 schillings at its disposal.

Duties:

Basic geological research for the location of ores, petroleum, and mineral salts, and exploitation of such resources in the Soviet-occupied or Soviet-controlled regions of eastern Europe.

Personalities:

Dr. Krecij-Graf, head of the company.

Dr. Karl Ferdinand Friedl, deputy.

Prof. Dr. Hecht, chief chemist.

-2-

Other members of the company are not yet known by name, but consist of geologists, geophysicists, surveyors, draughtsmen and chemists.

2. Dr. Friedl is credited with being the real discoverer of the Zistersdorf oil deposits. By dint of extensive research and numerous scientific papers, he successfully found and proved the existence of petroleum resources in this area. Having established himself as the first geologist of Zistersdorf, he became a shareholder of the Erdölproduktions-Gesellschaft. This was said to have been the first company to yield a 50% interest to the Soviets. The remaining shares stayed in Austrian hands. Although he was known as a Nazi Party member, his technical qualifications brought Friedl his appointment in 1945 as chief geologist of the Soviet Zistersdorf Oil Staff under the SV in Kantgasse.
3. Prof. Dr. Hecht, eminent Austrian chemist and formerly a university professor in Graz, was engaged in scientific work for the Germans from 1938-1945.
